

Breeding Technologies in Livestock Training Course

Professional Development Training Course Outline

Category	Veterinary and Animal Science	Duration	5 Days
Base Fee	\$1,500 USD	Delivery Mode	Online / On-site Hybrid

Course Introduction

Breeding Technologies in Livestock training course is designed to equip participants with advanced knowledge and practical skills in modern animal genetics, reproductive biotechnology, and sustainable livestock improvement. This course emphasizes genetic selection, artificial insemination (AI), embryo transfer, and molecular breeding tools to enhance productivity, profitability, and livestock health. By integrating innovative reproductive techniques and data-driven breeding strategies, participants will gain hands-on experience in improving herd performance, disease resistance, and milk and meat quality.

The program leverages cutting-edge technologies, including genomic selection, cryopreservation, and bioinformatics in breeding, to enable participants to implement efficient breeding programs in real-world settings. Through case studies, interactive workshops, and practical demonstrations, trainees will develop expertise in sustainable livestock production, breeding program management, and genetic improvement strategies. By the end of the course, participants will be empowered to optimize livestock reproduction, enhance genetic gain, and contribute to the global goal of food security and agricultural sustainability.

Programme Curriculum

Breeding Technologies in Livestock Training Course

Introduction

Breeding Technologies in Livestock training course is designed to equip participants with advanced knowledge and practical skills in modern animal genetics, reproductive biotechnology, and sustainable livestock improvement. This course emphasizes genetic selection, artificial insemination (AI), embryo transfer, and molecular breeding tools to enhance productivity, profitability, and livestock health. By integrating innovative reproductive techniques and data-driven breeding strategies, participants will gain hands-on experience in

improving herd performance, disease resistance, and milk and meat quality.

The program leverages cutting-edge technologies, including genomic selection, cryopreservation, and bioinformatics in breeding, to enable participants to implement efficient breeding programs in real-world settings. Through case studies, interactive workshops, and practical demonstrations, trainees will develop expertise in sustainable livestock production, breeding program management, and genetic improvement strategies. By the end of the course, participants will be empowered to optimize livestock reproduction, enhance genetic gain, and contribute to the global goal of food security and agricultural sustainability.

Course Duration

5 days

Course Objectives

1. Understand the fundamentals of livestock genetics and genomics.
2. Learn advanced reproductive technologies like AI, IVF, and embryo transfer.
3. Develop skills in genetic selection and breeding program design.
4. Apply bioinformatics tools in livestock breeding.
5. Implement sustainable breeding strategies for improved productivity.
6. Enhance disease resistance through genetic interventions.
7. Master cryopreservation techniques for gametes and embryos.
8. Utilize data-driven decision making in herd management.
9. Integrate nutritional and health management in breeding programs.
10. Explore genomic selection for milk, meat, and wool traits.
11. Analyze case studies of successful livestock breeding programs.
12. Develop cost-effective breeding strategies for small and large farms.
13. Promote ethical and sustainable practices in livestock improvement.

Target Audience

1. Livestock farmers and breeders
2. Veterinary professionals
3. Animal science researchers
4. Agricultural extension officers
5. Dairy and meat industry managers
6. Biotechnology students
7. Government agriculture department staff
8. Entrepreneurs in animal husbandry

Course Modules

Module 1: Fundamentals of Livestock Genetics

- Principles of **Mendelian genetics**
- Introduction to **quantitative genetics**
- **Heritability and genetic correlation**
- Genetic evaluation of **production traits**
- **Case Study:** Genetic improvement in dairy cattle

Module 2: Artificial Insemination (AI) and Reproductive Technologies

- AI techniques in **cattle, sheep, and goats**
- **Estrus detection and synchronization**
- Semen collection, evaluation, and storage
- Fertility management strategies
- **Case Study:** Successful AI programs in smallholder farms

Module 3: Embryo Transfer and In Vitro Fertilization (IVF)

- Principles of **superovulation** and embryo collection
- IVF and embryo culture techniques
- Embryo transfer protocols in livestock
- Embryo cryopreservation
- **Case Study:** Embryo transfer in high-yield dairy herds

Module 4: Genomic Selection and Molecular Breeding

- Introduction to **genomics in livestock**
- **SNP genotyping and marker-assisted selection**
- Using **genetic markers for trait improvement**
- Integration of genomics in breeding programs
- **Case Study:** Genomic selection for milk production

Module 5: Breeding Program Design and Management

- Principles of **selection and mating systems**
- **Crossbreeding and purebred strategies**
- Herd record management and data analysis
- Evaluating genetic progress
- **Case Study:** Designing a sustainable breeding program

Module 6: Cryopreservation and Gamete Management

- Semen and oocyte cryopreservation techniques
- Liquid nitrogen storage protocols
- Thawing and usage strategies
- **Quality control and biosecurity**
- **Case Study:** Long-term semen preservation for breed conservation

Module 7: Health, Nutrition, and Reproductive Efficiency

- Role of **nutrition in reproduction**
- Managing **reproductive disorders**
- Disease prevention and control strategies
- Enhancing **fertility and calving rates**
- **Case Study:** Integrating health and breeding in small ruminants

Module 8: Practical Applications and Field Demonstrations

- Hands-on AI and embryo transfer practices
- Herd selection and evaluation exercises
- Genomic data analysis workshops
- Field visits to successful breeding farms

- **Case Study:** Comprehensive livestock breeding management

Training Methodology

This course employs a participatory and hands-on approach to ensure practical learning, including:

- Interactive lectures and presentations.
- Group discussions and brainstorming sessions.
- Hands-on exercises using real-world datasets.
- Role-playing and scenario-based simulations.
- Analysis of case studies to bridge theory and practice.
- Peer-to-peer learning and networking.
- Expert-led Q&A sessions.
- Continuous feedback and personalized guidance.

Register as a group from 3 participants for a Discount

Send us an email: info@fineskilltrainingcenter.org or call +254769199797

Certification

Upon successful completion of this training, participants will be issued with a globally- recognized certificate.

Tailor-Made Course

We also offer tailor-made courses based on your needs.

Key Notes

- a. The participant must be conversant with English.
- b. Upon completion of training the participant will be issued with an Authorized Training Certificate
- c. Course duration is flexible and the contents can be modified to fit any number of days.
- d. The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.
- e. One-year post-training support Consultation and Coaching provided after the course.
- f. Payment should be done at least a week before commence of the training, to Fineskill Training Center account, as indicated in the invoice so as to enable us prepare better for you.

Upcoming Scheduled Sessions

Start Date	End Date	Location	Price
21 Sep 2026	25 Sep 2026	Online	\$1,000
21 Sep 2026	25 Sep 2026	Physical	\$1,500

Start Date	End Date	Location	Price
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
