Data-Driven Decision Making in Construction Training Course

Professional Development Training Course Outline

Category	Architectural Engineering	**Duration**	5 Days
Base Fee	$1,500 USD	**Delivery Mode**	Online / On-site Hybrid

Course Introduction

The Data-Driven Decision Making in Construction training course is designed to transform traditional construction management into a modern, intelligence-led discipline powered by analytics, AI, BIM (Building Information Modeling), IoT sensors, predictive analytics, and digital twins. In today's fast-evolving construction ecosystem, organizations are under pressure to improve project efficiency, cost optimization, risk reduction, sustainability, and real-time decision intelligence. This course equips professionals with the capability to convert raw construction data into actionable insights that improve productivity, safety, and profitability across all project phases.

With the rise of Construction 4.0, smart infrastructure, cloud-based project management systems, and machine learning-driven forecasting, decision-making in construction is no longer intuition-based. This program empowers engineers, project managers, and stakeholders to adopt real-time dashboards, data visualization tools, KPI tracking systems, and advanced analytics frameworks. Participants will gain hands-on exposure to industry-relevant tools and methodologies that enhance project control, schedule reliability, resource allocation, and risk prediction, enabling organizations to build smarter, faster, and more sustainably.

Programme Curriculum

Data-Driven Decision Making in Construction Training Course

Introduction

Data-Driven Decision Making in Construction training course is designed to transform traditional construction management into a modern, intelligence-led discipline powered by analytics, AI, BIM (Building Information Modeling), IoT sensors, predictive analytics, and digital twins. In today's fast-evolving construction ecosystem,

organizations are under pressure to improve project efficiency, cost optimization, risk reduction, sustainability, and real-time decision intelligence. This course equips professionals with the capability to convert raw construction data into actionable insights that improve productivity, safety, and profitability across all project phases.

With the rise of Construction 4.0, smart infrastructure, cloud-based project management systems, and machine learning-driven forecasting, decision-making in construction is no longer intuition-based. This program empowers engineers, project managers, and stakeholders to adopt real-time dashboards, data visualization tools, KPI tracking systems, and advanced analytics frameworks. Participants will gain hands-on exposure to industry-relevant tools and methodologies that enhance project control, schedule reliability, resource allocation, and risk prediction, enabling organizations to build smarter, faster, and more sustainably.

Course Duration

5 days

Course Objectives

1. Apply data analytics in construction project management for smarter decisions
2. Integrate BIM and digital twin technology for real-time project visualization
3. Utilize predictive analytics for construction risk management
4. Improve cost estimation accuracy using machine learning models
5. Enhance project scheduling through AI-based forecasting tools
6. Implement IoT-based construction site monitoring systems
7. Develop data-driven procurement and supply chain optimization strategies
8. Strengthen construction safety analytics and incident prediction systems
9. Use real-time dashboards for KPI tracking and performance control
10. Apply cloud-based construction management platforms effectively
11. Optimize resource allocation using data modeling techniques
12. Support sustainable construction through ESG data analytics
13. Enable strategic decision-making using big data insights in construction

Target Audience

- Construction Project Managers
- Civil Engineers and Site Engineers
- Quantity Surveyors
- BIM Specialists and Digital Engineers
- Construction Consultants
- Infrastructure Developers
- Government Infrastructure Planners
- Construction Technology Analysts

Course Modules

Module 1: Fundamentals of Data-Driven Construction

- Overview of **Construction 4.0 and digital transformation**
- Introduction to **data lifecycle in construction projects**
- Types of construction data (structured & unstructured)
- Role of **AI, IoT, and BIM in decision-making**

- Data governance and quality frameworks
- **Case Study:** Smart city infrastructure project using real-time sensor data for traffic and utility planning optimization.

Module 2: BIM and Digital Twin Integration

- BIM fundamentals for construction analytics
- Digital twin modeling for real-time simulation
- 4D and 5D BIM applications
- Data synchronization between physical and digital assets
- Visualization tools for project monitoring
- **Case Study:** Airport terminal construction using digital twin simulation to reduce design conflicts by 35%.

Module 3: Predictive Analytics in Construction

- Introduction to predictive modeling techniques
- Forecasting project delays and cost overruns
- Machine learning models for construction trends
- Historical data analysis for decision support
- Risk probability scoring systems
- **Case Study:** High-rise building project using predictive analytics to prevent 20% schedule overruns.

Module 4: Construction Cost Intelligence

- Data-driven cost estimation methods
- Real-time budget tracking systems
- Cost variance analysis tools
- AI-based material pricing prediction
- Financial dashboards for stakeholders
- **Case Study:** Infrastructure road project optimizing budget with AI-driven cost control systems.

Module 5: Smart Construction Scheduling

- Critical path analysis with data tools
- AI-powered scheduling optimization
- Resource leveling using analytics
- Delay prediction models
- Real-time schedule tracking dashboards
- **Case Study:** Commercial complex project reducing delays by 28% using AI scheduling tools.

Module 6: Construction Risk & Safety Analytics

- Risk identification using data modeling
- Safety incident prediction systems
- IoT-based worker monitoring
- Hazard detection using AI vision systems
- Compliance tracking dashboards
- **Case Study:** Tunnel construction project reducing accidents by 40% using predictive safety analytics.

Module 7: Procurement & Supply Chain Analytics

- Data-driven procurement strategies

- Supplier performance analytics
- Inventory optimization models
- Demand forecasting systems
- Blockchain integration in procurement
- **Case Study:** Mega housing project reducing material waste by 25% using supply chain analytics.

Module 8: Sustainability & Smart Infrastructure Analytics

- ESG metrics in construction projects
- Carbon footprint tracking systems
- Energy-efficient construction analytics
- Smart materials and lifecycle analysis
- Green building certification data systems
- **Case Study:** Green office tower achieving LEED certification through data-driven sustainability tracking.

Training Methodology

This course employs a participatory and hands-on approach to ensure practical learning, including:

- Interactive lectures and presentations.
- Group discussions and brainstorming sessions.
- Hands-on exercises using real-world datasets.
- Role-playing and scenario-based simulations.
- Analysis of case studies to bridge theory and practice.
- Peer-to-peer learning and networking.
- Expert-led Q&A sessions.
- Continuous feedback and personalized guidance.

Register as a group from 3 participants for a Discount

Send us an email: info@fineskilltrainingcenter.org or call *+254769199797*

Certification

Upon successful completion of this training, participants will be issued with a globally- recognized certificate.

Tailor-Made Course

We also offer tailor-made courses based on your needs.

Key Notes

a. The participant must be conversant with English.

b. Upon completion of training the participant will be issued with an Authorized Training Certificate

c. Course duration is flexible and the contents can be modified to fit any number of days.

d. The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.

e. One-year post-training support Consultation and Coaching provided after the course.

f. Payment should be done at least a week before commence of the training, to Fineskill Training Center account, as indicated in the invoice so as to enable us prepare better for you.

Upcoming Scheduled Sessions

Start Date	End Date	Location	Price
21 Sep 2026	25 Sep 2026	Online	$1,000
21 Sep 2026	25 Sep 2026	Physical	$1,500
21 Sep 2026	25 Sep 2026	Physical	$0
21 Sep 2026	25 Sep 2026	Physical	$0
21 Sep 2026	25 Sep 2026	Physical	$0
21 Sep 2026	25 Sep 2026	Physical	$0
21 Sep 2026	25 Sep 2026	Physical	$0
21 Sep 2026	25 Sep 2026	Physical	$0
