

Green Mining Technologies Training Course

Professional Development Training Course Outline

Category	General Training	Duration	5 Days
Base Fee	\$1,500 USD	Delivery Mode	Online / On-site Hybrid

Course Introduction

The Green Mining Technologies Training Course is a cutting-edge professional development program designed to equip learners with the latest knowledge in sustainable mining practices, decarbonized extraction systems, ESG compliance, circular economy mining, and low-impact resource engineering. As global demand for critical minerals rises, the mining sector is undergoing rapid transformation toward carbon-neutral operations, renewable-powered mining systems, waste valorization, and environmental restoration technologies. Green Mining Technologies Training Course bridges the gap between traditional mining engineering and next-generation green innovation.

Participants will explore advanced solutions such as AI-driven mine optimization, electrified mining fleets, bioleaching technologies, waterless ore processing, digital twin mining systems, and ESG reporting frameworks aligned with global sustainability standards. The program emphasizes real-world application, ensuring learners are prepared to lead in eco-efficient mining, climate-smart resource extraction, and sustainable mineral supply chains across global industries.

Programme Curriculum

Green Mining Technologies Training Course

Introduction

The Green Mining Technologies Training Course is a cutting-edge professional development program designed to equip learners with the latest knowledge in sustainable mining practices, decarbonized extraction systems, ESG compliance, circular economy mining, and low-impact resource engineering. As global demand for critical minerals rises, the mining sector is undergoing rapid transformation toward carbon-neutral operations, renewable-powered mining systems, waste valorization, and environmental restoration technologies. Green Mining Technologies Training Course bridges the gap between traditional mining engineering and next-generation green innovation.

Participants will explore advanced solutions such as AI-driven mine optimization, electrified mining fleets, bioleaching technologies, waterless ore processing, digital twin mining systems, and ESG reporting frameworks aligned with global sustainability standards. The program emphasizes real-world application, ensuring learners are prepared to lead in eco-efficient mining, climate-smart resource extraction, and sustainable mineral supply chains across global industries.

Course Duration

5 days

Course Objectives

1. Master sustainable mining engineering principles
2. Understand carbon-neutral mining operations design
3. Apply renewable energy integration in mining sites
4. Implement AI and automation in smart mining systems
5. Develop expertise in ESG compliance and reporting frameworks
6. Learn waste reduction and tailings management strategies
7. Apply circular economy principles in mineral recovery
8. Understand bioleaching and green extraction technologies
9. Design low-water and dry processing mining systems
10. Evaluate environmental impact assessment (EIA) techniques
11. Integrate digital twin technology for mine optimization
12. Promote rehabilitation and mine site restoration practices
13. Analyze global critical minerals sustainability strategies

Target Audience

1. Mining engineers and geologists
2. Environmental sustainability professionals
3. Government mining regulators and policymakers
4. ESG analysts and compliance officers
5. Energy transition consultants
6. Metallurgy and mineral processing specialists
7. Graduate students in mining/environmental sciences
8. Corporate sustainability managers in extractive industries

Course Modules

Module 1: Foundations of Green Mining Systems

- Evolution from conventional to sustainable mining
- Environmental challenges in extractive industries
- Principles of eco-efficient mining design
- Introduction to green mining technologies
- Global sustainability standards in mining
- **Case Study:** Transition of Scandinavian mining companies toward carbon-neutral operations

Module 2: Renewable Energy in Mining Operations

- Solar-powered mining infrastructure
- Wind energy integration in remote mines

- Hybrid microgrid systems
- Battery storage solutions for mining sites
- Energy efficiency optimization
- **Case Study:** Chile's solar-powered copper mining operations in the Atacama Desert

Module 3: AI, Automation & Smart Mining Systems

- AI-based ore detection and analysis
- Autonomous drilling and hauling systems
- Predictive maintenance in mining machinery
- Digital twin mine modeling
- Real-time data analytics for optimization
- **Case Study:** Australia's autonomous iron ore mines using AI-driven fleets

Module 4: Sustainable Mineral Processing & Bioleaching

- Green chemistry in mineral extraction
- Bioleaching and microbial mining techniques
- Waterless ore processing technologies
- Reduced chemical leaching methods
- Waste-to-resource conversion
- **Case Study:** Bio-mining applications in South African gold recovery projects

Module 5: ESG Compliance & Environmental Governance

- ESG reporting frameworks
- Environmental compliance audits
- Stakeholder engagement strategies
- Risk management in mining operations
- Sustainable investment reporting
- **Case Study:** ESG transformation in Canadian lithium mining companies

Module 6: Waste Management & Tailings Innovation

- Tailings dam safety and monitoring
- Dry stacking technologies
- Waste valorization techniques
- Circular mining waste recovery
- Pollution control systems
- **Case Study:** Reprocessing tailings in Brazilian iron ore mines

Module 7: Mine Rehabilitation & Ecosystem Restoration

- Land reclamation strategies
- Biodiversity restoration techniques
- Post-mining land use planning
- Soil regeneration technologies
- Community-based rehabilitation programs
- **Case Study:** Coal mine rehabilitation projects in Germany's Lusatia region

Module 8: Critical Minerals & Sustainable Supply Chains

- Global demand for critical minerals
- Ethical sourcing and traceability
- Supply chain decarbonization
- Strategic mineral resource planning
- Geopolitical sustainability factors
- **Case Study:** Rare earth supply chain restructuring in the European Union

Training Methodology

- Interactive lectures and presentations.
- Group discussions and brainstorming sessions.
- Hands-on exercises using real-world datasets.
- Role-playing and scenario-based simulations.
- Analysis of case studies to bridge theory and practice.
- Peer-to-peer learning and networking.
- Expert-led Q&A sessions.
- Continuous feedback and personalized guidance.

Register as a group from 3 participants for a Discount

Send us an email: info@fineskilltrainingcenter.org or call +254769199797

Certification

Upon successful completion of this training, participants will be issued with a globally- recognized certificate.

Tailor-Made Course

We also offer tailor-made courses based on your needs.

Key Notes

- The participant must be conversant with English.
- Upon completion of training the participant will be issued with an Authorized Training Certificate
- Course duration is flexible and the contents can be modified to fit any number of days.
- The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.
- One-year post-training support Consultation and Coaching provided after the course.
- Payment should be done at least a week before commence of the training, to Fineskill Training Center account, as indicated in the invoice so as to enable us prepare better for you.

Upcoming Scheduled Sessions

Start Date	End Date	Location	Price
21 Sep 2026	25 Sep 2026	Online	\$1,000
21 Sep 2026	25 Sep 2026	Physical	\$1,500
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
