

Training Course on Integrated Crop-Livestock Systems Management

Professional Development Training Course Outline

Category	Agriculture	Duration	5 Days
Base Fee	\$1,500 USD	Delivery Mode	Online / On-site Hybrid

Course Introduction

Integrated Crop-Livestock Systems (ICLS) are at the forefront of sustainable agricultural practices, combining crop and livestock operations to enhance productivity, resource-use efficiency, soil health, and climate resilience. Training Course on Integrated Crop-Livestock Systems Management is designed to build practical skills, technical knowledge, and systems-thinking capacity among agricultural professionals, farmers, extension officers, and agribusiness entrepreneurs. With the rise of climate-smart agriculture, regenerative practices, and circular economy principles, ICLS offers a pathway toward resilient and profitable agro-ecosystems.

As global food security faces increasing pressure from climate change, land degradation, and market volatility, the synergy between crop and livestock enterprises has become essential. This course delivers in-depth insights into rotational grazing, nutrient recycling, pasture-crop integration, livestock nutrition, and agroecological intensification. Participants will explore real-world case studies, apply evidence-based practices, and develop strategies to implement integrated systems tailored to diverse agro-climatic zones.

Programme Curriculum

Training Course on Integrated Crop-Livestock Systems Management

Introduction

Integrated Crop-Livestock Systems (ICLS) are at the forefront of sustainable agricultural practices, combining crop and livestock operations to enhance productivity, resource-use efficiency, soil health, and climate resilience. Training Course on Integrated Crop-Livestock Systems Management is designed to build practical skills, technical knowledge, and systems-thinking capacity among agricultural professionals, farmers, extension officers, and agribusiness entrepreneurs. With the rise of climate-smart agriculture, regenerative practices, and circular economy principles, ICLS offers a pathway toward resilient and profitable agro-ecosystems.

As global food security faces increasing pressure from climate change, land degradation, and market volatility, the synergy between crop and livestock enterprises has become essential. This course delivers in-depth insights into rotational grazing, nutrient recycling, pasture-crop integration, livestock nutrition, and agroecological intensification. Participants will explore real-world case studies, apply evidence-based practices, and develop strategies to implement integrated systems tailored to diverse agro-climatic zones.

Course Objectives

1. Understand principles of integrated crop-livestock systems and their ecological benefits
2. Analyze nutrient cycling and soil fertility enhancement via livestock integration
3. Design sustainable pasture and grazing management systems
4. Apply regenerative agricultural practices to mixed farming
5. Improve feed and forage systems aligned with cropping cycles
6. Integrate manure management and composting in cropping operations
7. Identify economic opportunities in crop-livestock value chains
8. Utilize precision agriculture tools in mixed farming environments
9. Develop water-efficient systems for livestock and crops
10. Promote climate-resilient practices and carbon sequestration in ICLS
11. Evaluate gender roles and social inclusivity in integrated systems
12. Implement animal health and welfare protocols for mixed farms
13. Assess market linkages, policy frameworks, and funding opportunities for ICLS

Target Audiences

1. Smallholder farmers
2. Agricultural extension officers
3. Agribusiness managers
4. Researchers and academics
5. NGOs and development practitioners
6. Government agricultural officers
7. Environmental consultants
8. Agri-tech and sustainability innovators

Course Duration: 5 days

Course Modules

Module 1: Introduction to Integrated Crop-Livestock Systems

- Definition and scope of ICLS
- Benefits and constraints
- Historical evolution of integrated systems
- Current trends and innovations
- Ecological and economic synergies
- **Case Study: Brazil's Embrapa ICLS model**

Module 2: Soil Fertility and Nutrient Management

- Role of livestock in nutrient cycling
- Composting and manure application
- Cover crops and green manures
- Soil testing and monitoring
- Organic matter management
- **Case Study: Kenya's soil-carbon sequestration pilot**

Module 3: Grazing and Pasture Management

- Rotational and managed grazing systems
- Forage species selection and pasture planning
- Fodder conservation methods
- Grass-legume integration
- Monitoring pasture productivity
- **Case Study: Silvopastoral systems in Colombia**

Module 4: Livestock Feeding and Nutrition

- Balancing rations with farm-grown feed
- Use of crop residues
- Seasonal feed planning
- Enhancing digestibility and nutrient uptake
- Feeding systems for different livestock types
- **Case Study: Ethiopia's dairy-beef feed integration**

Module 5: Crop Management in Mixed Systems

- Crop-livestock rotation models
- Intercropping and relay cropping
- Conservation tillage and mulching
- Integrating livestock into crop residue use
- Managing pests and diseases holistically
- **Case Study: Rice-duck farming in Southeast Asia**

Module 6: Animal Health and Welfare

- Disease surveillance in mixed systems
- Zoonotic risk management
- Vaccination and deworming schedules
- Housing and shelter design
- Biosecurity measures
- **Case Study: Uganda's One Health livestock initiative**

Module 7: Climate Resilience and Environmental Benefits

- Carbon sequestration and GHG mitigation
- Drought-tolerant forage and crop selection
- Water harvesting and reuse
- Biodiversity conservation
- Resilient system design frameworks
- **Case Study: Australia's carbon farming initiative**

Module 8: Business, Policy, and Value Chain Integration

- Agribusiness models for ICLS
- Financial planning and investment
- Policy support and enabling environments
- Market access and product diversification
- Gender and youth inclusion strategies
- **Case Study: Integrated livestock-marketing cooperatives in Rwanda**

Training Methodology

- Participatory lectures and group discussions

- On-farm demonstrations and practical simulations
- Case study analysis and real-life scenarios
- Hands-on activities and role-playing
- Problem-solving workshops and action planning
- Evaluation through pre- and post-training assessments

Register as a group from 3 participants for a Discount

Send us an email: info@fineskilltrainingcenter.org or call +254769199797

Certification

Upon successful completion of this training, participants will be issued with a globally- recognized certificate.

Tailor-Made Course

We also offer tailor-made courses based on your needs.

Key Notes

- The participant must be conversant with English.
- Upon completion of training the participant will be issued with an Authorized Training Certificate
- Course duration is flexible and the contents can be modified to fit any number of days.
- The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.
- One-year post-training support Consultation and Coaching provided after the course.
- Payment should be done at least a week before commence of the training, to Fineskill Training Center account, as indicated in the invoice so as to enable us prepare better for you.

Upcoming Scheduled Sessions

Start Date	End Date	Location	Price
21 Sep 2026	25 Sep 2026	Online	\$1,000
21 Sep 2026	25 Sep 2026	Physical	\$1,500
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0

Start Date	End Date	Location	Price
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
