

Training Course on Synthetic Data Generation using Generative Models

Professional Development Training Course Outline

Category	Data Science	Duration	5 Days
Base Fee	\$1,500 USD	Delivery Mode	Online / On-site Hybrid

Course Introduction

In today's data-driven landscape, the demand for high-quality, diverse, and privacy-compliant data is paramount for **AI innovation**, **machine learning model training**, and **data analytics**. Traditional methods of data collection often face significant hurdles related to **data privacy regulations** (like GDPR, HIPAA), **data scarcity**, and the inherent **biases** present in real-world datasets. Synthetic data generation, powered by cutting-edge **generative AI models**, offers a revolutionary solution. This course provides an in-depth exploration of how to create realistic, statistically representative artificial datasets that unlock new possibilities for **research and development**, secure **data sharing**, and robust **model validation**, all while ensuring **privacy preservation** and enhancing **data utility**.

Training Course on Synthetic Data Generation using Generative Models: Creating Artificial Data for Privacy and Augmentation empowers data professionals to master the techniques of generating synthetic data. Participants will delve into the theoretical underpinnings of **Generative Adversarial Networks (GANs)**, **Variational Autoencoders (VAEs)**, and other advanced **deep learning architectures** for data synthesis. Through practical, hands-on exercises and real-world case studies, attendees will learn to implement, evaluate, and deploy synthetic data solutions across various industries, addressing critical challenges such as **data imbalance**, **cold start problems**, and the need for **secure data environments**. This course is essential for anyone looking to leverage the power of **artificial intelligence** to transform their data strategy and accelerate innovation.

Programme Curriculum

Training Course on Synthetic Data Generation using Generative Models: Creating Artificial Data for Privacy and Augmentation

Introduction

In today's data-driven landscape, the demand for high-quality, diverse, and privacy-compliant data is paramount for **AI innovation**, **machine learning model training**, and **data analytics**. Traditional methods of data collection often face significant hurdles related to **data privacy regulations** (like GDPR, HIPAA), **data scarcity**, and the inherent **biases** present in real-world datasets. Synthetic data generation, powered by cutting-edge **generative AI models**, offers a revolutionary solution. This course provides an in-depth exploration of how to create realistic, statistically representative artificial datasets that unlock new possibilities for **research and development**, secure **data sharing**, and robust **model validation**, all while ensuring **privacy preservation** and enhancing **data utility**.

Training Course on Synthetic Data Generation using Generative Models: Creating Artificial Data for Privacy and Augmentation empowers data professionals to master the techniques of generating synthetic data. Participants will delve into the theoretical underpinnings of **Generative Adversarial Networks (GANs)**, **Variational Autoencoders (VAEs)**, and other advanced **deep learning architectures** for data synthesis. Through practical, hands-on exercises and real-world case studies, attendees will learn to implement, evaluate, and deploy synthetic data solutions across various industries, addressing critical challenges such as **data imbalance**, **cold start problems**, and the need for **secure data environments**. This course is essential for anyone looking to leverage the power of **artificial intelligence** to transform their data strategy and accelerate innovation.

Course Duration

5 days

Course Objectives

1. Comprehend and implement foundational **generative models** including GANs, VAEs, and Diffusion Models for diverse data types.
2. Apply advanced techniques like **differential privacy** and **homomorphic encryption** to ensure robust privacy in synthetic data generation.
3. Utilize synthetic data to effectively **augment datasets** for improved **machine learning model performance** and **robustness**, especially in low-data regimes.
4. Evaluate the **fidelity**, **utility**, and **privacy guarantees** of generated synthetic data using statistical metrics and machine learning benchmarks.
5. Implement methodologies to identify and mitigate biases in original datasets through intelligent synthetic data generation.
6. Explore and analyze diverse **industry-specific case studies** showcasing the practical application of synthetic data in healthcare, finance, automotive, and retail.
7. Understand the ethical implications and best practices for responsible deployment of synthetic data in AI systems.
8. Design and implement efficient **data pipelines** for large-scale synthetic data generation and management.
9. Leverage synthetic data for **cross-domain applications** and to enhance **transfer learning** capabilities.
10. Navigate and comply with strict data privacy regulations by employing privacy-enhancing synthetic data techniques.
11. Generate synthetic data for rare events and **edge cases** to improve the resilience and accuracy of AI models.
12. Gain practical experience in coding and fine-tuning generative models using popular **AI frameworks** like TensorFlow and PyTorch.
13. Develop strategies for creating secure, compliant, and accessible synthetic data environments for collaborative research and development.

Organizational Benefits

- Mitigate risks associated with handling sensitive real-world data, ensuring adherence to regulations like GDPR, HIPAA, and CCPA, thus reducing legal and reputational exposure.
- Overcome data scarcity and access high-quality, diverse training datasets faster and more cost-effectively, significantly accelerating the development and deployment of robust AI and machine learning models.
- Lower the expenses associated with data acquisition, labeling, and anonymization, as synthetic data can be generated on-demand and at scale.
- Address issues like data imbalance and rare event representation, leading to more accurate, generalizable, and unbiased AI models.
- Foster a culture of experimentation by providing readily available, unrestricted datasets for research, prototyping, and exploring new business opportunities without compromising real data.
- Enable secure sharing of valuable data assets with internal and external stakeholders (e.g., partners, researchers) without exposing sensitive information.
- Create comprehensive test datasets for rigorous model validation, stress testing, and anomaly detection, leading to more reliable and resilient AI systems.
- Expedite the development and deployment of data-driven products and services by streamlining the data provisioning process.

Target Audience

1. Data Scientists & Machine Learning Engineers.
2. AI Researchers.
3. Privacy Officers & Compliance Managers
4. Software Developers & DevOps Engineers.
5. Data Analysts
6. Product Managers.
7. Solutions Architects
8. Business Leaders & Executives.

Course Outline

Module 1: Introduction to Synthetic Data and Generative AI

- Understanding Synthetic Data: Definition, types (fully synthetic, partially synthetic), and its importance in modern data ecosystems.
- Challenges of Real-World Data: Data scarcity, privacy concerns, regulatory hurdles (GDPR, HIPAA), and bias in traditional datasets.
- Overview of Generative Models: Introduction to the concept of AI models capable of creating new data instances.
- Key Concepts in Generative AI: Latent space, probability distributions, data fidelity, and utility.
- Foundations of AI Ethics: Responsible data practices and the ethical considerations in synthetic data generation.
- *Case Study: Overcoming Data Scarcity in Rare Disease Research using Synthetic Patient Records.*

Module 2: Generative Adversarial Networks (GANs) for Tabular Data

- GAN Architecture: Generator and Discriminator networks, their adversarial training process, and objectives.
- Training GANs: Practical considerations, common challenges (mode collapse, training instability), and mitigation strategies.
- Implementing Tabular GANs: Hands-on coding examples for generating synthetic tabular datasets (e.g., customer demographics, financial transactions).
- Evaluating Tabular Synthetic Data: Metrics for assessing statistical similarity, utility, and privacy of generated data.
- Advanced GAN Techniques for Tabular Data: Conditional GANs (cGANs), WGAN-GP for improved stability.
- *Case Study: Synthetic Financial Transaction Data for Fraud Detection Model Training and Regulatory Compliance.*

Module 3: Variational Autoencoders (VAEs) for Complex Data

- VAE Architecture: Encoder-decoder networks, latent variable models, and the evidence lower bound (ELBO).
- VAE for Data Generation: Understanding the generative process and its probabilistic nature.
- Application to Image and Text Data: Hands-on implementation of VAEs for generating synthetic images and short text sequences.
- Comparing GANs vs. VAEs: Strengths, weaknesses, and appropriate use cases for each architecture.
- Disentangled Representations: Exploring how VAEs can learn interpretable features in the latent space.
- *Case Study: Generating Synthetic Medical Images (e.g., X-rays, MRI scans) for AI diagnostics without patient privacy breaches.*

Module 4: Diffusion Models and Advanced Generative Techniques

- Introduction to Diffusion Models: The forward diffusion process and the reverse denoising process.
- Sampling from Diffusion Models: Techniques for generating high-quality synthetic data.
- Emerging Generative Architectures: Brief overview of normalizing flows, autoregressive models, and their applications.
- Hybrid Approaches: Combining elements of different generative models for superior performance.
- Computational Considerations: Hardware requirements, distributed training, and optimization for large-scale synthetic data generation.
- *Case Study: Creating Realistic Synthetic Environments for Autonomous Vehicle Training and Simulation.*

Module 5: Privacy-Preserving Synthetic Data Generation

- Fundamentals of Data Privacy: Anonymization, pseudonymization, and the concept of re-identification risk.
- Differential Privacy: Theory, implementation techniques, and its role in guaranteeing privacy in synthetic data.
- Secure Multi-Party Computation (SMC) & Federated Learning: Integrating these concepts with synthetic data generation for collaborative privacy.
- Privacy-Enhancing Technologies (PETs): Overview and their synergy with synthetic data.
- Measuring Privacy Leakage: Quantifying the risk of information disclosure in synthetic datasets.

- *Case Study: Enabling Cross-Organizational Data Collaboration in Healthcare Research using Differentially Private Synthetic Data.*

Module 6: Synthetic Data for Data Augmentation and Model Training

- **Strategic Data Augmentation:** When and how to use synthetic data to expand limited datasets.
- **Improving Model Robustness:** Training models on synthetic data to enhance generalization and resilience to adversarial attacks.
- **Addressing Class Imbalance:** Techniques for generating synthetic samples for minority classes to improve model performance.
- **Cold Start Problem Mitigation:** Using synthetic data to bootstrap models in scenarios with insufficient real data.
- **Transfer Learning with Synthetic Data:** Fine-tuning pre-trained models using synthetic datasets for new domains.
- *Case Study: Boosting E-commerce Recommendation Systems with Synthetic User Behavior Data.*

Module 7: Evaluation, Quality, and Deployment of Synthetic Data

- **Quantitative Evaluation Metrics:** Statistical tests (e.g., KS test, propensity score), machine learning utility metrics (e.g., classification accuracy on synthetic data).
- **Qualitative Assessment:** Visual inspection, domain expert review, and user feedback.
- **Bias Detection and Mitigation:** Advanced techniques for identifying and correcting inherent biases in synthetic data.
- **Deployment Strategies:** Integrating synthetic data generation into existing data pipelines and MLOps workflows.
- **Monitoring and Maintenance:** Ensuring the ongoing quality and relevance of synthetic data over time.
- *Case Study: Validating New Product Features with Synthetic Customer Feedback and Usage Data.*

Module 8: Advanced Topics and Future Trends in Synthetic Data

- **Synthetic Data for Time Series:** Applying generative models to sequential data like financial market trends or sensor readings.
- **Multimodal Synthetic Data:** Generating synthetic data across different modalities (e.g., images and text).
- **Ethical AI and Governance:** Establishing frameworks for responsible and ethical use of synthetic data in real-world applications.
- **Regulatory Landscape Evolution:** Anticipating future regulations and their impact on synthetic data practices.
- **Emerging Research and Industry Trends:** Discussing the future of synthetic data, including synthetic data marketplaces and domain-specific applications.
- *Case Study: Optimizing Smart City Operations through Synthetic Urban Mobility and Sensor Data.*

Training Methodology

This course employs a **blended learning approach**, combining theoretical foundations with extensive practical application.

- **Interactive Lectures:** Engaging presentations covering core concepts, algorithms, and best practices.

- **Hands-on Coding Labs:** Practical sessions using Python, popular generative AI libraries (TensorFlow, PyTorch), and relevant data manipulation tools. Participants will implement, train, and evaluate various generative models.
- **Real-world Case Studies:** In-depth analysis of successful synthetic data implementations across diverse industries, highlighting challenges, solutions, and impact.
- **Group Discussions & Problem-Solving:** Collaborative exercises to foster critical thinking and exchange of ideas.
- **Q&A Sessions:** Dedicated time for addressing participant queries and clarifying complex topics.
- **Project-Based Learning:** A culminating project where participants apply their learned skills to generate and evaluate synthetic data for a chosen scenario.
- **Expert-Led Demonstrations:** Live demonstrations of advanced techniques and tools.
- **Resource Sharing:** Access to comprehensive course materials, code repositories, and relevant research papers.

Register as a group from 3 participants for a Discount

Send us an email: info@fineskilltrainingcenter.org or call +254769199797

Certification

Upon successful completion of this training, participants will be issued with a globally- recognized certificate.

Tailor-Made Course

We also offer tailor-made courses based on your needs.

Key Notes

- The participant must be conversant with English.
- Upon completion of training the participant will be issued with an Authorized Training Certificate
- Course duration is flexible and the contents can be modified to fit any number of days.
- The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.
- One-year post-training support Consultation and Coaching provided after the course.
- Payment should be done at least a week before commence of the training, to Fineskill Training Center account, as indicated in the invoice so as to enable us prepare better for you.

Upcoming Scheduled Sessions

Start Date	End Date	Location	Price
21 Sep 2026	25 Sep 2026	Online	\$1,000
21 Sep 2026	25 Sep 2026	Physical	\$1,500
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
