

Use of ICT Tools in Epidemiology Training Course

Professional Development Training Course Outline

Category	Information Technology	Duration	5 Days
Base Fee	\$1,500 USD	Delivery Mode	Online / On-site Hybrid

Course Introduction

In the ever-evolving field of epidemiology, the integration of Information and Communication Technology (ICT) tools is revolutionizing how data is collected, analyzed, and interpreted. The *Training Course on the Use of ICT Tools in Epidemiology* is designed to equip public health professionals, epidemiologists, and researchers with the necessary skills to leverage digital tools for more accurate and efficient epidemiological investigations. As diseases become more complex and global, the ability to harness ICT tools to manage and analyze epidemiological data has become critical in improving health outcomes.

ICT tools such as geographic information systems (GIS), data management software, statistical analysis tools, and mobile health applications are now fundamental in the study of epidemiology. These technologies help epidemiologists track disease patterns, predict outbreaks, analyze trends, and implement effective public health interventions. This course focuses on how these tools can be integrated into epidemiological research, offering practical insights and hands-on training to enhance the effectiveness of epidemiological studies.

Programme Curriculum

Use of ICT Tools in Epidemiology Training Course

Introduction

In the ever-evolving field of epidemiology, the integration of Information and Communication Technology (ICT) tools is revolutionizing how data is collected, analyzed, and interpreted. *Use of ICT Tools in Epidemiology Training Course* equip health professionals and epidemiologists, with skills to leverage digital tools for more accurate and efficient epidemiological investigations. As diseases become more complex and global, the ability to harness ICT tools to manage and analyze epidemiological data has become critical in improving health outcomes.

ICT tools such as geographic information systems (GIS), data management software, statistical analysis tools, and mobile health applications are now fundamental in the study of epidemiology. These technologies help epidemiologists track disease patterns, predict outbreaks, analyze trends, and implement effective public health interventions. This course focuses on how these tools can be integrated into epidemiological research, offering practical insights and hands-on training to enhance the effectiveness of epidemiological studies.

The course aims to bridge the gap between traditional epidemiological methods and modern digital tools, enabling professionals to work more efficiently in today's data-driven healthcare environment. By mastering the use of ICT in epidemiology, participants will be empowered to conduct more accurate surveillance, streamline data collection, and make informed decisions that can save lives and reduce the burden of disease.

Course Duration

5 Days

Course Objectives

1. Understand the role of ICT in modern epidemiology and its impact on public health.
2. Learn to use geographic information systems (GIS) for disease mapping and spatial analysis.
3. Gain proficiency in using statistical software for data analysis in epidemiological studies.
4. Explore the role of mobile health applications in data collection and disease monitoring.
5. Master data management tools for organizing and storing large epidemiological datasets.
6. Learn how to integrate data from various ICT tools to create comprehensive reports.
7. Understand the principles of data visualization and how to use ICT tools for effective communication.
8. Apply ICT tools to monitor and track the spread of infectious diseases in real time.
9. Explore case studies of successful ICT tool usage in epidemiological studies.
10. Develop strategies for implementing ICT solutions in large-scale epidemiological surveillance systems.

Organizational Benefits

1. Improved accuracy in data collection and analysis, leading to better decision-making.
2. Streamlined disease surveillance through the use of GIS and mobile health applications.
3. Enhanced ability to monitor disease outbreaks in real-time.
4. More efficient data management and storage, reducing the risk of data loss.
5. Better capacity for visualizing and communicating public health data to stakeholders.
6. Greater collaboration and information sharing between teams using integrated ICT tools.
7. Improved capacity to respond to health emergencies with accurate, real-time data.
8. Increased public health efficiency through automation of data collection and analysis processes.
9. Enhanced training for staff in utilizing modern ICT tools for epidemiological studies.

10. Improved public health outcomes through timely interventions based on ICT-enabled data insights.

Target Participants

- Epidemiologists and public health researchers
- Healthcare professionals and public health administrators
- Data analysts and statisticians working in public health sectors
- Public health program managers and decision-makers
- Government health officers and policy-makers
- Non-governmental organization (NGO) professionals working in health surveillance
- Medical professionals involved in disease tracking and prevention
- IT specialists working in healthcare and public health sectors

Course Outline

Module 1: Introduction to ICT in Epidemiology

1. The importance of ICT in modern epidemiology.
2. Overview of key ICT tools used in epidemiology.
3. Understanding the role of data in public health decision-making.
4. Key benefits and challenges of using ICT in epidemiological studies.
5. Case study: How ICT tools enhanced outbreak response in a developing country.

Module 2: Using GIS for Disease Mapping and Spatial Analysis

1. Introduction to Geographic Information Systems (GIS).
2. Using GIS to track disease patterns and trends.
3. Mapping the spread of infectious diseases.
4. Visualizing epidemiological data on maps for better decision-making.
5. Case study: GIS application in malaria control programs.

Module 3: Statistical Software for Data Analysis

1. Introduction to statistical software for epidemiological analysis (e.g., STATA, SPSS, R).
2. Data cleaning and preprocessing techniques.
3. Analyzing epidemiological data for trends and risk factors.
4. Performing statistical tests for public health studies.
5. Case study: Statistical analysis of a cholera outbreak.

Module 4: Mobile Health Applications in Epidemiology

1. Overview of mobile health (mHealth) tools and their role in epidemiology.
2. Using mobile apps for real-time disease surveillance.
3. Data collection through mobile devices in remote areas.
4. Managing and analyzing data from mHealth applications.
5. Case study: Use of mobile applications in tracking COVID-19 cases.

Module 5: Data Management and Integration

1. Data management techniques for epidemiological studies.
2. Using ICT tools for organizing large epidemiological datasets.
3. Integrating data from various ICT tools into a single reporting system.
4. Ensuring data quality and integrity through ICT solutions.
5. Case study: Integrating multiple data sources for a national health surveillance system.

Module 6: Data Visualization and Reporting

1. Introduction to data visualization tools and techniques.
2. Creating interactive dashboards for epidemiological data.
3. Communicating findings through effective charts and graphs.
4. Reporting epidemiological data to stakeholders using ICT tools.
5. Case study: Data visualization in reporting public health surveillance outcomes.

Training Methodology

This course employs a participatory and hands-on approach to ensure practical learning, including:

- Interactive lectures and presentations.
- Group discussions and brainstorming sessions.
- Hands-on exercises using real-world datasets.
- Role-playing and scenario-based simulations.
- Analysis of case studies to bridge theory and practice.
- Peer-to-peer learning and networking.
- Expert-led Q&A sessions.
- Continuous feedback and personalized guidance.

Register as a group from 3 participants for a Discount

Send us an email: info@fineskilltrainingcenter.org or call +254769199797

Certification

Upon successful completion of this training, participants will be issued with a globally- recognized certificate.

Tailor-Made Course

We also offer tailor-made courses based on your needs.

Key Notes

- a. The participant must be conversant with English.
- b. Upon completion of training the participant will be issued with an Authorized Training Certificate
- c. Course duration is flexible and the contents can be modified to fit any number of days.

- d. The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.
- e. One-year post-training support Consultation and Coaching provided after the course.
- f. Payment should be done at least a week before commence of the training, to Fineskill Training Center account, as indicated in the invoice so as to enable us prepare better for you.

Upcoming Scheduled Sessions

Start Date	End Date	Location	Price
21 Sep 2026	25 Sep 2026	Online	\$1,000
21 Sep 2026	25 Sep 2026	Physical	\$1,500
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
