

Using Mobile Data for Credit Assessment Training Course

Professional Development Training Course Outline

Category	Microfinance & Financial Inclusion	Duration	10 Days
Base Fee	\$3,000 USD	Delivery Mode	Online / On-site Hybrid

Course Introduction

Using Mobile Data for Credit Assessment has become a transformative approach in modern financial services, enabling lenders and fintech institutions to evaluate customer creditworthiness using alternative data sources, real-time behavior analytics, and digital footprints. As digital ecosystems expand globally, mobile-based credit scoring provides more accurate, inclusive, and scalable solutions for assessing underserved populations with limited or no traditional credit history. Using Mobile Data for Credit Assessment Training Course equips participants with strong competencies in mobile data analytics, predictive scoring models, alternative data governance, privacy compliance, and fintech-driven lending innovations that directly support financial inclusion and digital lending growth.

The training provides an end-to-end understanding of how mobile usage patterns, geolocation traces, transaction metadata, airtime behavior, repayment histories, and smartphone sensor data can be used to build robust credit risk models. Through practical simulations, case studies, and hands-on analysis, participants learn to integrate mobile data into decision engines, enhance automation, reduce default risks, and create impactful digital credit products. The course prepares participants to apply cutting-edge tools, algorithms, and regulatory-aligned strategies that strengthen mobile-based lending systems in emerging and mature markets.

Programme Curriculum

Using Mobile Data for Credit Assessment Training Course

Introduction

Using Mobile Data for Credit Assessment has become a transformative approach in modern financial services, enabling lenders and fintech institutions to evaluate customer creditworthiness using alternative data sources,

real-time behavior analytics, and digital footprints. As digital ecosystems expand globally, mobile-based credit scoring provides more accurate, inclusive, and scalable solutions for assessing underserved populations with limited or no traditional credit history. Using Mobile Data for Credit Assessment Training Course equips participants with strong competencies in mobile data analytics, predictive scoring models, alternative data governance, privacy compliance, and fintech-driven lending innovations that directly support financial inclusion and digital lending growth.

The training provides an end-to-end understanding of how mobile usage patterns, geolocation traces, transaction metadata, airtime behavior, repayment histories, and smartphone sensor data can be used to build robust credit risk models. Through practical simulations, case studies, and hands-on analysis, participants learn to integrate mobile data into decision engines, enhance automation, reduce default risks, and create impactful digital credit products. The course prepares participants to apply cutting-edge tools, algorithms, and regulatory-aligned strategies that strengthen mobile-based lending systems in emerging and mature markets.

Course Objectives

1. Understand foundational principles of mobile data–driven credit assessment.
2. Identify key categories of mobile data used for alternative credit scoring.
3. Apply trending digital and behavioral analytics techniques to credit evaluation.
4. Integrate mobile usage patterns into predictive credit scoring models.
5. Strengthen digital lending risk assessment with alternative data insights.
6. Evaluate fintech-driven mobile lending frameworks and scoring technologies.
7. Assess regulatory and data privacy requirements affecting mobile credit scoring.
8. Leverage machine learning and AI for mobile-based credit decisioning.
9. Improve credit assessment accuracy through multivariate data modeling.
10. Build automated digital credit workflows using mobile data streams.
11. Strengthen fraud detection through mobile behavioral indicators.
12. Interpret scoring outputs to enhance customer segmentation and loan pricing.
13. Develop inclusive digital credit strategies for unbanked and underserved populations.

Organizational Benefits

- More accurate credit scoring for thin-file and no-file customers
- Reduced loan defaults through advanced behavioral modeling
- Increased automation and faster credit decision processes
- Enhanced fraud prevention using mobile behavioral patterns
- Expanded digital lending portfolios with lower operational costs
- Strengthened compliance with data governance frameworks
- Improved customer segmentation and personalized loan offers
- Better integration with fintech ecosystems and mobile platforms
- Greater reach into underserved populations and informal markets
- Stronger competitive advantage in digital credit innovation

Target Audiences

- Digital lending officers and managers
- Fintech product developers and strategists
- Credit risk and underwriting professionals
- Data analysts and data scientists in financial institutions
- Mobile network operator financial services teams

- Microfinance and digital credit program officers
- Regulators and policy specialists in digital finance
- Consultants in digital transformation and financial analytics

Course Duration: 10 days

Course Modules

Module 1: Foundations of Mobile Data Credit Assessment

- Understanding alternative data and mobile-based lending
- Key concepts of digital credit scoring
- Types of mobile data used in credit evaluation
- Benefits of mobile-based alternative scoring
- Challenges and limitations of mobile data models
- Case Study: Mobile credit scoring adoption in emerging markets

Module 2: Mobile Usage Patterns and Behavioral Indicators

- Call detail records (CDRs) analysis
- Device behavior and smartphone interaction patterns
- Geolocation and mobility data insights
- Airtime top-up and usage behavior
- Social graph and communication frequency patterns
- Case Study: Behavioral modeling improving approval rates

Module 3: Data Extraction and Mobile Data Sources

- Mobile network operator (MNO) data streams
- Smartphone sensor and app metadata
- Mobile wallet and transaction history
- Third-party data aggregators
- Data cleaning and preparation techniques
- Case Study: Data extraction improving model accuracy

Module 4: Predictive Analytics for Mobile Data

- Machine learning techniques for scoring
- Building predictive risk models
- Feature engineering using mobile behavioral variables
- Model validation and performance evaluation
- Interpreting scoring outputs
- Case Study: ML-driven scoring reducing default rates

Module 5: Alternative Data for Credit Inclusion

- Understanding thin-file and unbanked customer needs
- Alternative data sources beyond telecom data
- Integrating socioeconomic and digital footprint indicators
- Role of mobile money in credit expansion
- Behavioral finance considerations
- Case Study: Alternative data improving rural lending

Module 6: Mobile Money Data in Credit Assessment

- Transaction patterns and spending behavior
- Wallet balances and liquidity analysis
- P2P, bill payment, and merchant transaction mapping
- Digital financial services (DFS) data relevance
- Detecting anomalies in wallet usage
- Case Study: Mobile money used for credit eligibility

Module 7: AI and Automation in Mobile Credit Scoring

- Using AI for continuous scoring updates
- Automated decision engines
- Real-time scoring algorithms
- Chatbots and automated KYC verifications
- AI model monitoring and governance
- Case Study: AI automation scaling digital lending

Module 8: Fraud Detection Using Mobile Data

- Fraud risk indicators from mobile patterns
- SIM swap detection and identity verification
- Device fingerprinting and anomaly detection
- Algorithmic scoring for fraud risk
- Enhancing security protocols
- Case Study: Mobile fraud detection reducing losses

Module 9: Regulatory Frameworks and Data Privacy

- Data protection laws governing mobile data
- Consent and ethical considerations
- Cross-border data transfer restrictions
- Regulatory requirements for digital lenders
- Building compliant scoring models
- Case Study: Regulatory compliance improving consumer trust

Module 10: Credit Scoring Model Deployment

- Integrating models into lending systems
- Real-time API integrations
- Workflow automation in loan decisioning
- Dashboard and reporting tools
- Continuous model improvement mechanisms
- Case Study: Scoring deployment accelerating loan approvals

Module 11: Monitoring and Evaluation of Mobile Data Models

- Key risk and performance metrics
- Detecting model drift and bias
- Continuous recalibration techniques
- Stress testing scoring models
- Reporting for management and regulators

- Case Study: Monitoring framework stabilizing portfolio risk

Module 12: Customer Segmentation and Loan Pricing

- Segmentation using mobile data clusters
- Pricing models for mobile-based lending
- Identifying high-potential borrower profiles
- Enhancing loan repayment strategies
- Tailoring products to customer needs
- Case Study: Segmentation improving repayment behavior

Module 13: Partnering with Mobile Network Operators

- MNO–financial institution partnership models
- Data-sharing agreements
- Co-branded digital lending initiatives
- MNO licensing and regulatory considerations
- Strengthening collaborative scoring frameworks
- Case Study: MNO partnership expanding digital loans

Module 14: Designing Mobile-Based Lending Products

- Digital loan product structures
- Fast-disbursement models
- Automated repayment mechanisms
- User experience and customer journey mapping
- Risk-adjusted credit limits
- Case Study: Digital product redesign increasing uptake

Module 15: Building Sustainable Digital Credit Ecosystems

- Supporting national financial inclusion efforts
- Strengthening digital credit governance
- Long-term sustainability planning
- Ecosystem partnership strategies
- Innovation pathways for emerging markets
- Case Study: Ecosystem model driving long-term credit growth

Training Methodology

- Instructor-led presentations and conceptual briefings
- Hands-on mobile data analysis exercises
- Group discussions and peer learning activities
- Case study reviews from global digital credit markets
- Tool demonstrations for mobile data scoring models
- Simulation-based practice on credit assessment workflows

Register as a group from 3 participants for a Discount

Certification

Upon successful completion of this training, participants will be issued with a globally- recognized certificate.

Tailor-Made Course

We also offer tailor-made courses based on your needs.

Key Notes

- a. The participant must be conversant with English.
- b. Upon completion of training the participant will be issued with an Authorized Training Certificate
- c. Course duration is flexible and the contents can be modified to fit any number of days.
- d. The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.
- e. One-year post-training support Consultation and Coaching provided after the course.
- f. Payment should be done at least a week before commence of the training, to Fineskill Training Center account, as indicated in the invoice so as to enable us prepare better for you.

Upcoming Scheduled Sessions

Start Date	End Date	Location	Price
21 Sep 2026	02 Oct 2026	Online	\$2,000
21 Sep 2026	02 Oct 2026	Physical	\$3,000
21 Sep 2026	02 Oct 2026	Physical	\$0
21 Sep 2026	02 Oct 2026	Physical	\$0
21 Sep 2026	02 Oct 2026	Physical	\$0
21 Sep 2026	02 Oct 2026	Physical	\$0
21 Sep 2026	02 Oct 2026	Physical	\$0
21 Sep 2026	02 Oct 2026	Physical	\$0
